## Small but drawn out 1819 HARVEST

# Emerald Grain – Service, Knowledge, Commitment

## Grain Quality 1819 HARVEST

- Wheat Quality – High protein ranges. Overall excellent quality, issues around our northern sites with low FN after the late rain.
- Barley Quality – Test weight, Retention and screenings were excellent. Protein varied across the sites though overall we received high protein compared to previous years
- Canola Quality – notable lower oil content compared to 17/18.
- Large focus on chemical residue testing for harvest samples.

# Emerald Grain – Service, Knowledge, Commitment

## Logistics

- No harvest rail program due to export flow so sites were able to go under the first round of fumigation through January.
- Reduction in Customer requests for Emerald sites in JAN/FEB compared to previous years as demand into Victorian domestic homes are being serviced by the grower and Transshipment
- Change in market dynamic has changed the natural flow of Grain
